About this Document and Delivery of Instruction

This document is to serve as a supplement to the Roanoke County Public Schools Health Curriculum which incorporates the Virginia State Standards of Learning for Health Education, and many of the Family Life Standards. Those Family Life Standards deemed sensitive in nature have been included in this particular document in an effort to provide easy identification for parental and community review. For instructors, it’s a means of identifying those lessons that require special guidelines for delivery.

The standards covered in this guide are divided into two basic areas: human growth and development and personal safety.

Lessons in human growth and development have been developed by RCPS classroom teachers, school nurses and guidance counselors to correlate with the Virginia State Standards of Learning for Family Life Education. The delivery of instruction in this area will be done primarily by the school nurses in grades 4 and 5. Parents have the opportunity to review these lessons and teaching materials upon request and may choose to opt their child out of any or all of the lessons.

Lessons in personal safety have been developed by the RCPS Guidance Counselors and will be delivered as part of elementary school guidance program in grades K-5. These lessons correlate with the Virginia State Standards of Learning for Family Life Education and the Virginia Public Schools Standards of School Counseling Programs. Parents have the opportunity to review all guidance lessons and teaching materials upon request and may choose to opt their child out of any or all of the guidance program.

RCPS Philosophy of Family Life Education

Roanoke County youth are growing up in a rapidly changing society wherein many traditional values are being challenged. To respond to these challenges, the emphasis is on helping students to cope with the environmental, social and physical pressures they will encounter throughout life. To that end, it is a goal of Roanoke County Public Schools to create an environment that nurtures the development of interpersonal skills, ethical and moral behavior, and physical and psychological well-being.

Although this education begins in the home and is primarily a function of the family unit, the schools will supplement the family by offering essential sexuality components within the general health curriculum in order to assist parents in this important growth process.

Such a program shall encompass education in sexuality identification, communication skills, respect for self and others with emphasis on abstinence, growth (inclusive of physical, mental, social, and emotional) and skills in decision-making. Inherent in this curriculum is a set of universal values, including honesty, respect and responsibility. Any health and family life education instruction initiated within the public schools should assist the student to critically evaluate cultural changes and develop an appreciation of traditional values.
Family Life Education Guidelines

These guidelines have been developed to assist the schools and instructors in implementing an effective program of Family Life Education. Instructors should be keenly aware of their influence on the lives of their students and should strive to exemplify the highest moral character which is the ultimate goal of this program.

Due to the sensitive nature of this material the following procedures shall be observed.

A. Opt-Out Policy

In compliance with the Board of Education’s guidelines for Family Life Education, this curriculum is offered as an “opt-out” program.

1. Parents are to be notified through a standard RCPS form regarding the inclusion of FLE in our curriculum, the provisions for curriculum review and the procedures for opting out of those lessons.
2. The curriculum and instructional materials are to be made available for parental review.
3. All students will be included in the program unless their parent/guardian has requested they opt out using the appropriate form included in this document.
4. Students who opt out of the program are to be given an alternate health related topic that is meaningful to the child and relevant to the overall health curriculum.

B. Teaching Techniques and Procedures

1. This curriculum has been designed for delivery by school counselors and nurses in collaboration with the classroom teachers.
2. Model lesson plans have been designed to guide instruction on the most sensitive topics included in this curriculum.
3. Instructors should not permit students to discuss private, personal, or intimate family experiences with the whole group. Students are encouraged to discuss problems individually with teachers or guidance counselors.
4. Instructors should expect students to use proper terminology but should avoid drill work in this area.
5. Since different grade levels and sexes may use the same classrooms, discretion should be used in materials displayed on bulletin boards.
6. Surveys and questionnaires concerning sensitive areas shall be avoided.
7. Instructors should not assign reports and projects within the sensitive areas.
8. Instructors should be sensitive to the modesty and privacy of each student.
9. Instructors should not feel compelled to answer all questions. They may answer students individually after class or refer them to their parents, counselors and ministers/priest for answers.
10. Only school district-approved materials may be used at grade levels for which they were designated.
11. The instructor will provide all students who have been "opted" from certain Family Life Education segments alternate units of health education.
12. All new and transfer students are to be given the parent letter explaining the Family Life Education program when they register.
13. Substitute teachers and student teachers shall not teach the sensitive topics of the Family Life Education program.
14. Boys and girls will be separated for instruction as indicated at each grade level.
15. Inherent within this guide is a core of universal values that instructors should promote when evident and appropriate. They include love and caring, honesty, trust, respect for self and others, self-control, responsibility for self, others and community, and abstinence.
Personal Safety Education

Grades K-5

from the

Roanoke County Elementary School
Counseling Curriculum

These lessons in personal safety have been developed by the RCPS Guidance Counselors and will be delivered as part of elementary school guidance program in grades K-5. These lessons correlate with the Virginia State Standards of Learning for Family Life Education and the Virginia Public Schools Standards of School Counseling Programs. Parents have the opportunity to review all guidance lessons and teaching materials upon request and may choose to opt their child out of any or all of the guidance program.
ROANOKE COUNTY ELEMENTARY SCHOOL COUNSELING CURRICULUM

Curriculum: Personal Safety Education - Kindergarten

Standards of Learning: FLE K.8 The student will recognize the elements of good and bad touches by others.

Correlates with EA 6 and EP 6 from the VA Public Schools Standards of School Counseling Programs

Descriptive Statement: The student will learn to protect his/her body by differentiating good vs. bad touches and identifying safe adults.

Instructional notes:  
Human Growth and Development is to be taught in gender separated classes under the guidance of the school nurse within one to two 45 min. class periods.  
Personal safety is to be presented as part of the elementary guidance curriculum.  
Roanoke County Elementary Counseling Curriculum: Personal Safety Education
Dear Parent,

On _____________, your child will be studying the subject of human growth and development at school. The content of the course has been carefully prepared and aimed at the comprehension level of your child. Boys and girls will be separated for all instruction.

This course will include information about:

• stages of growth from birth to adulthood.
• bodily changes that occur during puberty.
• human reproductive systems.
• responsibilities associated with growth and development.

The primary goal of this course is to provide students with a better understanding of themselves and others. The knowledge that the students gain will also help them develop their sense of responsibility for respecting the feelings and attitudes of other people and caring about other people.

The combination of information prepared for this course and student questions can help overcome much misinformation that some students may have about this subject. As a parent, you may wish to clarify or elaborate on questions that your child may ask at home and continue these discussions as your child grows and develops.

Feel free to contact me if you have any questions.

Sincerely,

Teacher

*This form issued upon parent request only.
Sexuality Education – Instructional Mistakes to Avoid

“TEACHING IDEAS FOR SEXUALITY EDUCATION”

By Glen G. Gilbert

GLEN G. GILBERT is associate professor of health education, Portland State University, School of Health and Physical Education, P.O. Box 751, Portland, Oregon 97297.

During my career as a health educator I have observed or have had related to me numerous stories of problems teachers have encountered while teaching sex education. Without exception these teachers have been well meaning and have had the best interest of their students at heart. Poor judgment on their part, however, has often resulted in placing their sex education programs in jeopardy; many supporters of sex education have become non-supporters because of incidents involving poor judgment. It is my hope that such error can be minimized by calling them to the attention of present and future teachers of sex education. The list offered here is by no means complete as teachers are constantly finding new ways to get into trouble. Here are a few easy ways of getting into trouble teaching sex education.

1. Teaching sex education with inadequate background. Sex education is an area of high accountability. Making content errors in this subject may quickly result in lack of credibility with students, parents, colleagues, and administrators.

2. Keeping your principal or administrator in the dark. It is imperative that your principals and administrators be apprised of what is happening in your classroom. If you really wish to get into trouble with administrators put them through a couple of late night phone calls from irate parents concerning sex education material or projects which they know nothing about. It is highly likely you will also be blessed with a call from that administrator. Keeping the appropriate administrator up to date, for some, will mean just a statement that you are now studying sex education. For others it will mean detailed lesson plans from which you are not to deviate.

3. Giving "secret" lessons. Another surefire way to get into trouble is to have secret lessons with your students. Just make a statement such as "Today's lesson is just between you and me-it is our little secret" and you can be certain many parents will hear of it. You have no business teaching material that you cannot defend.

4. Violating district or school policy. This is clearly a violation of your responsibility as a teacher. Curriculum guides are set up to give you parameters to work in, and in a general sense reflect the wishes of the community. You should stay within those parameters no matter what "you know is good" for your students. If you don't agree with the curriculum you should certainly work to change it, and a great many curricula need improvement. Until you get it changed, however, you are legitimately bound by contract to reflect the existing curriculum.
5. **Using poorly constructed homemade materials.** Parents especially do not find a poorly constructed penis model or free hand drawings of genitalia amusing. Remember that you are dealing with their children. Giving a homework assignment of freehand drawings of the male and female genitalia may seem innocuous, but many a parent has noted that their daughter drew an erect penis and wondered where she got her model image. Using anatomical drawings is certainly a legitimate exercise, but have them duplicated for your students.

6. **Using questionable language.** Slang terminology is often all students know of reproductive anatomy and physiology. Students should not be reprimanded for using such terminology unless they use it on purpose to create a disturbance, but they should be tactfully taught the correct terminology. Teachers who feel they must use such terms generally to "get on their level" may soon be on their level equally unemployed.

7. **Not previewing films or materials.** There should be a district committee to approve films, and you are courting disaster if you use films not on the approved list. It is always wise to preview films, but in sex education it is essential.

8. **Not being prepared for opposition.** Most programs that are properly established suffer little opposition, as the vast majority of Americans support sex education, but numerous programs have been attacked. All teachers should be able to verbalize the need for sex education when called upon and should anticipate such encounters. Do not respond with hostility or contempt. Parents will have honest questions and they deserve sincere well-documented answers.

9. **Teaching by the joke.** Several instructors have gotten into trouble by telling or allowing students to tell "off color" jokes n the classroom. Teachers telling inappropriate jokes can give the sex education classroom an improper atmosphere for such an important subject.

10. **Setting unrealistic goals.** Many programs have been set up with goals and objectives to eliminate VD, divorce, etc. Such programs are doomed to failure. A good example of this is when a program sets out to lower the VD rate. When a good sex education program is established, the VD rate often goes up! The reason for this increase is that people recognize signs and symptoms and go in for treatment. At a later date the rate may go down.

11. **Letting personal bias overly influence teaching.** Everyone knows what normal sexual behavior is-it is the way they behave. This erroneous belief of major consequence is often carried into the classroom and can be devastating. The advocate of open marriage, marriage at all costs, or any other particular lifestyle has no business preaching it in the classroom. We are all biased. Recognize that bias and be careful not to try to convert your students.

12. **Using inappropriate guest speakers.** The selection of guest speakers must be done with great care. Not only should they be carefully chosen, but briefed by the teacher concerning the purpose, topic, scope and any limitations as well as points of emphasis.

13. **Citing personal sexual experience.** It seems hard to believe that teachers need to be reminded that this is not okay, but it still occurs. Do not let students push you into revealing your personal life. It simply has no place in the classroom.
14. **Using non-approved questionnaires of students’ sexual experiences or attitudes.** It may seem to you that finding out what is actually going on with your students is a good place to start your program, but your principal or administrator is likely to think differently. Remember that such questionnaires may be construed as a reflection of the performance of the school or district as a whole.

15. **Leaving non-approved reading material out for public view.** It is of course appropriate for you as a teacher to read anything you wish, but remember that the district has approved materials for use with students. Do not leave non-approved matter out where a student might pick it up or where an outsider might view it.

Please ask yourself if you are unnecessarily endangering your sex education program. Sex education is far too important to be eliminated or watered down because of mistakes in judgment. Remember, sex education is one of the few areas of education where teachers are truly held accountable for their teaching.
